

---

Torrent download is a popular method of downloading various copyrighted media, including movies. Torrents are basically small files that enable people to download a file from multiple sources at the same time. This helps speed up the download process and allows you to obtain the file more quickly than using one computer's connection at a time.

I can't really say if it is legal or not, but I do know people who use torrents for this reason all of the time. As soon as the movie is released on DVD it is available for download on torrent sites. It certainly beats having to walk or drive all over town to rent or buy a movie.

Torrents can be a great way to get a movie that you would otherwise not be able to find. Some movies are not always released in all areas of the world. This is even more true for classic movies that might only be available in certain regions of the world. The United States has a large number of classic films, especially from the 1950s and 1960s, which are virtually impossible to find if you live in Europe or Asia.

This is because most of the classic movies were only released in the United States and Canada. This is also true for many independent films. If you want to watch art house or independent films a torrent might be a great option.

There are a lot of people who use peer to peer technology to download their movies. The legality of this varies from country to country, but it can be a very attractive option for people who live in areas that don't have high speed internet or many movie rental stores.

In countries like Australia and Canada, people may not even have access to some of the newer releases from the United States, unless they go through very cumbersome procedures or buy DVDs from other countries online.

Peer to peer downloading is very useful for people living in areas with poor Internet access. If you are just getting started with your Internet connection or have a slow connection, You may not have the bandwidth necessary to download a whole movie.

Some movies are just too large for even the most powerful of computers to handle. These movies, with large file sizes, tend to be released on DVD-R format disks. Some of these DVDs will be "ripped" from the original disks with limited success or fail entirely.

This is where torrenting comes in handy. A torrent can be much more efficient at downloading large file sizes than a direct download. The main advantage of torrenting is that it takes advantage of the high bandwidth connections.

These files are small enough that they can be transferred quickly. It also means that you don't have to wait 23 hours to download the movie! This may not sound like much, but when you are taking physical action to download a movie it is much more satisfying.

Depending on where you live, it may or may not be legal to download movies or music this way.
